- ✓ **Industry knowledge & experience**
This will become apparent when you meet our engineers!
- ✓ **Manufacture accreditations and industry partners**
ITC are a BICSI Corporate member, & Molex Certified Installer (CI)
- ✓ **Cost-effective & future proof approach**
We take the responsibility of ensuring you get the right solution, for maximum ROI
- ✓ **Project Management**
D&B experienced managers ensure projects are always completed on time & within budget
- ✓ **Continuity & Reputation**
Since 1995, we're proud to have worked with organisations like Capita Maclaren, Fox Entertainment, NASDAQ, Hyundai, Woolworths - as well as Government and many SMEs

Is your communications room in need of an MOT – patch panels starting to resemble Spaghetti Junction?

Or are you looking to provision a communication room for your new office, but unsure which road to take?

Then ITC may be able to help.

Our Communications Room and Data Centre service, run by industry-recognised experts, can help you implement a cost-effective network solution able to support, protect and enhance the operation of your I.T. initiatives.

The service covers all elements of the build, from initial space planning through to physical build, provisioning of hardware, and the integration of all voice and data services, all meeting industry standards and physical regulations.

ITC also offers an overhaul service, helping clients get more out of their existing infrastructure, reducing network downtime, maintenance time and costs.

Your physical network infrastructure can provide exceptional, returns. At ITC we'll help you achieve this.

ITC – helping you meet your business requirements cost-effectively

Using the very latest cabling systems and processes, RCDD designers, BICSI qualified engineers, and a 25-year underwritten system guarantee; ITC is perfectly positioned to handle your comms rooms requirements.

By choosing ITC, you will be bringing on board a team of specialists who have been responsible for implementing communication systems for central government, military, health, and finance, amongst many other industries.

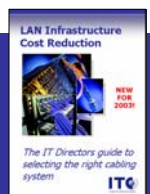

Our expert engineers can help you:

- Design & install a fully equipped secure communications room environment, meeting industry standards and fire suppression requirements
- Overhaul you comms room to dramatically reduce the risk of physical network downtime
- Maximise available resource, and incorporate a manageable platform for potential moves, adds and changes.

Project Management / Brief

With project management being a critical element, ITC offer full management of the project from initial "scope of works" assessment and definition through to the "go live" where engineers may be on hand to ensure complete client satisfaction.

- Pre project "requirement" and "Scope of Works" definition
- Identification and prioritisation of key requirements
- Identification of "business continuity" needs
- "Go live" engineering attendance
- Full documentation

Design Services

ITC can provide a fully integrated service encompassing all aspects of a comms room build from physical construction of the environment to Cat5e / Cat6 / Fibre Optical cabling for all your Voice and Data hardware.

- **Planning Consultation.** An ITC RCDD (Registered Communications Distribution Designer) specialist help plan your project, advising on all aspects of comms room design to the most exacting BICSI standards.
- **Architectural Design.** A full survey of the project, designing a solution tailored to your building environment and business needs.
- **Mechanical Design.** Delivering a solution based on reliability and performance.
- **Electrical Design.** A full evaluation of both your current and future power requirements, designing an electrical distribution system that best suit the needs of your communications equipment, staff and environmental systems. All ITC designs are based on reliability, usability and longevity attributes.
- **Fire Protection Design.** Provide early indication of fire to protect your staff, I.T. equipment and documentation. All ITC designed systems are carried out to meet fire authority and insurers requirements.

About ITC Connects

ITC designs, delivers and supports Network LAN Infrastructure for companies in the Southeast. Our clients include government, blue chip and growing companies, who seek industry-leading experts for open, unbiased consultancy and cost effective infrastructure solutions. ITC is also one of the UK's leading Cabling specialists for the Design & Build community.

Unlike our competitor's, ITC principally installs in Central London and Canary Wharf. This allows us to provide a better, more focused, fully managed service at competitive cost, helping you to reach your business objectives on time and within budget.
