

Network Cabling

"ITC's knowledge and experience continue to provide Capita with unrivalled service"

Mark Briggs
Facilities Manager, Capita

Why choose ITC for your network cabling requirements?

- ✓ **Quality Assurance & Standards Compliance**
Networks designed by RCDD industry experts, installed by BICSI qualified engineers, exceeding standards requirements
- ✓ **25-Year Warranty Guarantee**
One of the most comprehensive programs available for lifetime assurance, underwritten by Molex, a \$1.6 billion org
- ✓ **Industry knowledge & experience**
This will become apparent when you meet our engineers!
- ✓ **Manufacture accreditations and industry partners**
ITC are a BICSI Corporate member, & Molex Certified Installer (CI)
- ✓ **Cost-effective & future proof approach**
We take the responsibility of ensuring you get the right solution, for maximum ROI
- ✓ **Project Management**
D&B experienced managers ensure projects are always completed on time & within budget
- ✓ **Continuity & Reputation**
Since 1995, we're proud to have worked with organisations like Capita Maclaren, Fox Entertainment, NASDAQ, Hyundai, Woolworths - as well as Government and many SMEs

Cat 5e, Cat 6, Fibre, Wireless – Making the right choice

Specifying a structured cabling system that will meet the long-term communications needs of your company is a challenging task. It is vital to install a system that provides optimum performance with adequate headroom to accommodate future technology. The system must also be flexible, able to provide unfailing end-to-end performance regardless of the number of moves, adds, and changes made.

As an investment, your physical network infrastructure can provide exceptional returns.

"Physical management problems account for 70% of network problems, yet structured cabling is only a small percentage of your network investment"
Dave Bonney, RCDD, ITC Cabling

A correctly chosen and installed structured cabling system will outlive all other networking components, requiring minimal upgrades and ultimately save your business both time and money. Choosing the right cabling system is critical for performance and reliability.

At ITC, we'll help you make the right choice

Using the very latest cabling systems and processes, RCDD designers, BICSI qualified engineers, and a 25-year underwritten system guarantee; ITC is perfectly positioned to handle your voice and data requirements.

Our expert engineers can help you:

- Reduce maintenance costs and increase network performance
- Future proof your network, cost-effectively
- Better manage moves, adds and changes (MACs)
- Dramatically reduce the risk of physical network downtime

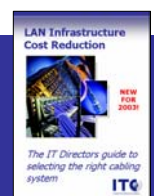

Fundamental to providing the right solution is the need to understand your business needs and long-term strategies. Only by doing this can ITC help save you money on the long term, and ensure that the demands of your business will be met.

Something else you'll instinctively notice with ITC is our strong emphasis on standards compliance and quality assurance. We believe this to be a critical element of LAN infrastructure, not a market differentiator!

Network Components & Services

■ Category 5e Infrastructure

A Category 5e network will give your corporate infrastructure the ability to support today's higher bandwidth requirements such as Gigabit Ethernet; designed to exceed the latest industry specifications (EN50173, ISO 11801 and EIA568B)

■ Category 6 Infrastructure

The new standard in high performance cabling solutions, able to support Gigabit Ethernet performance with additional headroom. Consequently, this will support future developments in higher speed protocols resulting in future proofing for your system.

■ Fibre

ITC can provide any fibre optic cabling solution demanded, from traditional "Backbone" solutions to "Horizontal" connectivity designed to yield the maximum benefits sought by our customers exacting requirements and needs both now and in the future.

■ Wireless

Supporting 10MB Ethernet, Wireless has limited usability, but may be suitable for highly mobile workforce, such as hot-desk offices, warehousing or temporary networks, where security and limited bit-rates are not an issue.

■ Real-time Intelligent patching

Monitoring your network system in real time, this system provides up-to-date and 100% accurate connectivity record for fault-finding and monitoring the implementation of moves, adds, and changes (MACs), presenting major maintenance cost savings.

About ITC Connects

ITC designs, delivers and supports Network LAN Infrastructure for companies in the Southeast. Our clients include government, blue chip and growing companies, who seek industry-leading experts for open, unbiased consultancy and cost effective infrastructure solutions. ITC is also one of the UK's leading Cabling specialists for the Design & Build community.

Unlike our competitor's, ITC principally installs in Central London and Canary Wharf. This allows us to provide a better, more focused, fully managed service at competitive cost, helping you to reach your business objectives on time and within budget.

FREE Pre-Sales Consultation

Depending on the scope of the project, pre-sales meetings usually last for less than 2 hours and are without obligation and free of charge.

Warranty Program

ITC offer clients a 25 Year Product, System and Application guarantee through Molex's Global Warranty program.

Providing one of the most comprehensive warranty programs in the industry, this program combines all of the key elements of the cabling infrastructure: design, cable, connecting hardware, installation, testing and commissioning to create a homogenous system.

The Technology

ITC only use the latest tried and tested technology to support your business.

Accredited to work with all industry-leading technologies, our world-class cabling and network experts take an independent view to ensure you receive the right solution.
